👤 Summary

Full-stack Software Engineer with 1+ years shipping production web applications end to end — React and TypeScript front ends over Java (Spring Boot) and Python (FastAPI) services on PostgreSQL, AWS and Kubernetes, with multi-tenant architecture, secure auth (OAuth 2.0, RBAC, MFA) and CI/CD.

⚙️ Technical Skills

Languages	Java, Python, TypeScript, JavaScript, C++ , SQL, HTML5, CSS3
Front End	React, Next.js, React Query, Zustand, Redux, React Router, Tailwind CSS, Vite, responsive UI
Back End	Spring Boot, FastAPI, Node.js, Express, Flask, REST APIs, microservices, WebSockets, SQLAlchemy
Data	PostgreSQL, MySQL, Redis, Amazon Redshift, Neo4j, Alembic migrations, query optimization
Cloud/DevOps	AWS (Lambda, S3, Redshift), Docker, Kubernetes, CI/CD, GitHub Actions, Git, Linux, microservice health probes
Security	OAuth 2.0, JWT, Keycloak, Clerk, RBAC, TOTP multi-factor auth, row-level security, OWASP ZAP (DAST)
Practices	Data Structures & Algorithms, System Design, Object-Oriented Design, unit testing, Agile/Scrum, code review

💼 Professional Experience

AECAD.ai

Apr 2026 - Present

Software Engineer (Software Engineer Intern, Apr - Jun 2026)

Remote

- Designed and implemented the AECAD web application and marketing website end to end — full UI design in Figma through production React and TypeScript — for an AI-powered CAD automation platform.
- Built the platform's core 3D CAD/DWG viewer from the first commit with the ODA Viewer SDK — layer and object management, tagging workflows, level-of-detail, TIN surfaces and snap points — plus render-performance work to unblock the main thread.
- Owned organization onboarding full-stack — React front end, FastAPI user-management service and PostgreSQL schema — delivered as coordinated cross-repository releases and cutting manual setup time by 40%.
- Developed user-management, plan-management and configuration REST APIs with supporting schema migrations, and implemented authentication and role-based access control with Clerk.
- Drove platform reliability: health endpoints and Kubernetes probes across seven microservices, OWASP ZAP DAST in CI/CD, event-driven cache invalidation, and end-to-end release testing validating core flows on every deployment.
- Shipped 130+ merged pull requests across 12 repositories spanning React/Next.js front ends, Python backend services, database migrations and Kubernetes/CI infrastructure.

BeeHyv Software Solutions

Jun 2025 - Mar 2026

Software Developer Intern

Hyderabad, India

- Developed scalable Java and Spring Boot microservices with secure multi-tenant authentication via Keycloak.
- Implemented OAuth 2.0 integrations for Intentwise Connectors, enabling third-party connectivity including the Meta Marketing API.
- Profiled, debugged and optimized large-scale analytical queries on Amazon Redshift over secure S3 data pipelines.
- Built automated reporting pipelines on AWS Lambda that reduced manual reporting effort by 60%.

📁 Projects

ZENTRO — Multi-Tenant Digital Workplace Platform

zentro-app.vercel.app

Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, Docker, React, TypeScript, WebSockets, S3

- Designed a modular FastAPI and PostgreSQL backend with import boundaries enforced in CI, over a transactional outbox event bus with at-least-once delivery, per-consumer retry and dead-letter replay, plus a durable job scheduler and asynchronous full-text search.
- Layered security across the stack: three-tier tenant isolation (JWT-scoped organization context, repository filtering, PostgreSQL row-level security), capability-based authorization, TOTP step-up verification, a hash-chained audit log, and Redis token-bucket rate limiting that fails closed on auth, payment and export scopes.
- Shipped the product surface: a version-pinned approval workflow engine with race-safe stage locking, idempotent payment release, a WebSocket gateway that authorizes every subscription, and HMAC-verified GitHub webhooks that close linked tasks on merge.

CivicFix — Civic Issue Reporting and Resolution Platform

github.com/marvillage/civicfix

React 19, TypeScript, Vite, Leaflet, Express 5, Prisma, PostgreSQL, JWT, Google Gemini, Cloudinary

- Built a full-stack civic platform — citizens report issues with photos, voice notes and GPS; municipalities resolve them — with a React 19 and Leaflet front end over 57 REST endpoints in Express 5, TypeScript, Prisma and PostgreSQL.
- Integrated Google Gemini vision to classify reported photos by category and severity, validating model output rather than trusting it, with Cloudinary media handling and reverse geocoding.
- Modeled the issue lifecycle as a transactional state machine with append-only history serving as the audit log, self-enforcing SLA deadlines that auto-escalate on breach, and JWT role-based access across citizen, authority and admin surfaces.

🎓 Education and Achievements

Indian Institute of Information Technology, Nagpur

2022 - 2026

Bachelor of Technology (B.Tech), Computer Science and Engineering — CGPA: 8.32/10

Nagpur, India

Achievements: Winner, Analytics Attax, IIT Kanpur; 2nd Place, Bug Bounty Competition; 3rd Place, Genathon 24-Hour Hackathon.
